

Fairstone Brooks Macdonald 4 Inc & Gr

Investment Aim

The portfolio is designed to provide risk adjusted returns. It aims to achieve capital appreciation and reduce investment risk through diversification across asset classes and geographies.

This portfolio is managed to maximise risk adjusted returns within a target volatility range of 6.5% and 10% over rolling 10-year time periods. This is not guaranteed, and actual volatility may fluctuate outside of these boundaries.

Ranking the risk on a scale of between 1 and 10, where 1 is the lowest, we place this portfolio as 4.

Investment Adviser's Market Commentary

Investment Adviser

Brooks Macdonald have a strong team leading the management of the Fairstone BM Model Portfolios, including highly experienced investment managers Frank Atkins, Alex Chittenden, James Hussey and Mark Shields. The team has consistently delivered strong investment performance, underpinned by their centralised investment process, providing clients and advisers with access to their award-winning investment management capabilities and high levels of service.

Trade tariff news impacts equity markets

Market fluctuations were driven by changes in trade tariff plans. US president Trump's plans for 25% tariffs on the country's biggest trading partners, Canada and Mexico, were delayed by a month, but China was not so fortunate, facing 10% tariffs on top of past tariff measures. Despite the overall relief, hopes for global trade were hit later on with news that the US plans to introduce 'reciprocal' tariffs in April against countries taxing US trade.

Trade tariffs can add unwelcome costs for global trade, pushing up price pressures, and risk forcing central banks to keep interest rates higher for longer. Diversified equity allocations, across both regions, countries and investment styles, can help to dampen such challenges.

Economic concerns drive demand for safe-haven assets

Bond yields declined as investors sought stability. Safe haven assets were in demand during the month as government bond yields declined (with corresponding bond prices rising). This was driven by growing concerns over economic stability and market volatility. Economic growth concerns appeared to outweigh the inflation outlook, especially with tariffs potentially keeping inflation pressures high.

With investors globally having to endure heightened volatility in bond yields in recent months, it continues to support our preference for shorter-dated bonds, which are less sensitive to economic changes compared to longer-dated bonds, yet still offer relatively attractive yields. Inflationary pressures remain a concern, but the focus has shifted more towards economic growth risks.

A mixed set of results from megacap tech

During the month, arguably the most-watched results from Nvidia landed – the posterchild for the current artificial intelligence technology spending boom. Given their dominance in US and global equity indices, the latest set of results from the US 'Magnificent Seven' group of companies (Alphabet, Amazon, Apple, Meta, Microsoft, Nvidia and Tesla), were always going to be important for investors. Nvidia's results, in particular, were good but not great, challenging investor expectations.

The volatility in megacap tech shares during the month is a reminder of the importance of managing tech concentration risk in portfolios. It is also a reminder of the value of active management, where passive equity index allocations can at times hide significant concentration risk.

US and Russia begin peace talks, unpending geopolitics

The US announced talks with Russia aimed at ending the war in Ukraine. This move changes the narrative of Russia as the aggressor. Furthermore, the US appeared to sideline both Europe and Ukraine in the talks, while signalling a reduction in military support for Europe's defence more broadly.

This has led European countries including the UK to plan increased military defence spending as a share of Gross Domestic Product (GDP). For the UK, the government announced plans to increase defence spending from 2.3% of GDP currently, to 2.5% in 2027, rising to 3% in the next Parliamentary term. This move is expected to positively impact the UK's defence sector and boost economic activity more broadly.

Target Market

Access to the portfolios is only available to investors on the recommendation of a financial adviser and it is the role of the adviser to determine the appropriateness and suitability of the portfolio to each investor's own personal needs, objectives and preferences.

Type of investors: Given the nature of non-complex UCITS funds the service is suitable for retail investors, professional clients and eligible counterparties. The service is predominantly designed for the use of retail investors.

Investors' knowledge and experience: Investors with basic, informed or advanced knowledge and experience of capital markets and investment risks and of funds and their characteristics.

Clients' financial situation with a focus on the ability to bear losses: Investors have a tolerance to fluctuations in capital invested and potential capital loss.

Clients' risk tolerance and compatibility of the risk/reward profile of the product with the target market: Due to the volatility of the markets in which the service may invest e.g. equity, bond and property markets the service has a risk and reward profile that is compatible with clients who have a risk tolerance aligned to the Investment Aim of the portfolio. Investors should be willing to accept price fluctuations in exchange for the opportunity of possible higher returns.

Clients' objectives and needs: Depending on the duration of the investment the portfolio may be suitable for clients who have a medium-term investment horizon (at least 5 years).

Clients who should not invest (the 'negative-target market'): This portfolio is deemed incompatible for clients who require full capital protection and/or are seeking on-demand full repayment of the amounts invested or who are fully risk averse/have no risk tolerance.
