Fairstone Passive Model Portfolio 4 Powered by Vanguard

Investment Aim

The portfolio is designed to provide risk adjusted returns. It aims to achieve capital appreciation and reduce investment risk through diversification across asset classes and geographies.

This portfolio is managed to maximise risk adjusted returns within a target volatility range of 6.5% and 10% over rolling 10-year time periods. This is not guaranteed, and actual volatility may fluctuate outside of these boundaries.

Ranking the risk on a scale of between 1 and 10, where 1 is the lowest, we place this portfolio as 4.

Investment Adviser's Market Commentary

Investment Adviser

Vanguard

Two contrasting forces shaped the global economy and financial markets during the second quarter: the energy shock caused by the Iran war and optimism surrounding artificial intelligence (AI). Global shares significantly outperformed bonds, with US and emerging market shares leading the gains. Rising investment in AI-related infrastructure and expectations of stronger company earnings supported share prices. In contrast, bond returns were weaker as investors feared the Iran war could drive up inflation, raising the prospect that interest rates would remain higher for longer.

In the UK, the economy grew by 0.6% in the first quarter, while inflation fell from 3.3% in March to 2.8% in May. This was the lowest rate since March 2025, helped by favourable comparisons with higher prices a year ago and measures announced in November's Budget. The Bank of England highlighted uncertainty over its inflation outlook because of higher oil prices linked to the Iran war. Political uncertainty also increased after the prime minister resigned in June, with a new prime minister expected as early as mid-July. UK government bond prices weakened in the early part of the period, as investors assessed the implications of a change in leadership and new chancellor, but then as the situation unfolded recovered to their levels at the beginning of the quarter.

The US economy grew by 0.5% in the first quarter, largely driven by growing AI investment. Inflation rose from 3.5% in March to 4.1% in May, mainly because of higher petrol and computer chip prices. The Federal Reserve, the US central bank, kept interest rates unchanged and indicated that rates may need to remain higher for longer.

The Euro area economy fell 0.2% in the first quarter, while inflation rose from 2.6% in March to 2.8% in June, driven by sharply higher energy prices. The European Central Bank raised interest rates by 0.25 percentage points to 2.25% in June. Euro area bond yields rose on inflation concerns before easing later in the quarter as Middle East ceasefire talks progressed, reducing the risk of prolonged higher energy prices.

Vanguard Capital Markets Model

The Vanguard Capital Markets Model Team researches, develops, and maintains a suite of powerful analytical models and tools. At the heart of them is the Vanguard Capital Markets Model (VCMM), a proprietary financial simulation engine that simulates returns for a wide range of asset classes.

The VCMM is designed to enable clients to make asset allocation decisions as well as help build portfolio solutions.

The team uses the VCMM to create dynamic, time-varying portfolios that change their asset allocations in response to the model's forecasts. These time-varying portfolios are designed to target a specific return, target a risk range or seek to maximise returns.

Vanguard has extensive experience in building portfolio solutions. For more than ten years, Vanguard has used these analytical models to construct portfolios for its Institutional Advisory Services group, which manages in excess of USD 40bn in AUM, as of 31 December 2018.

Target Market

Access to the portfolios is only available to investors on the recommendation of a financial adviser and it is the role of the adviser to determine the appropriateness and suitability of the portfolio to each investor's own personal needs, objectives and preferences.

Type of investors: Given the nature of non-complex UCITS funds the service is suitable for retail investors, professional clients and eligible counterparties. The service is predominantly designed for the use of retail investors.

Investors' knowledge and experience: Investors with basic, informed or advanced knowledge and experience of capital markets and investment risks and of funds and their characteristics.
Clients' financial situation with a focus on the ability to bear losses: Investors have a tolerance to fluctuations in capital invested and potential capital loss.

Clients' risk tolerance and compatibility of the risk/reward profile of the product with the target market: Due to the volatility of the markets in which the service may invest e.g. equity, bond and property markets the service has a risk and reward profile that is compatible with clients who have a risk tolerance aligned to the Investment Aim of the portfolio. Investors should be willing to accept price fluctuations in exchange for the opportunity of possible higher returns.

Clients' objectives and needs: Depending on the duration of the investment the portfolio may be suitable for clients who have a medium-term investment horizon (at least 5 years).

Clients who should not invest (the 'negative-target market'): This portfolio is deemed incompatible for clients who require full capital protection and/or are seeking on-demand full repayment of the amounts invested or who are fully risk averse/have no risk tolerance.
